Get the word out in minutes

with rapid and reliable mass notification to students, families and your entire learning community using voice messaging, SMS (text alerts), or e-mail.

For Routine Announcements or During Emergencies

Communicate quickly with your whole community, keeping them informed, prepared and — if necessary — safe, whether it's for routine announcements and reminders, attendance alerts, or an urgent situation.

Fully Integrated with Your Website Communications Strategy

Whether it's for routine announcements or during emergencies, when you post new content to your website you can instantly alert target audiences using voice messaging or link back to the new content via text alerts or e-mail.

Targeted Messaging

- Direct messages to entire schools or districts or to targeted groups such as parents, students, teachers, specific grade levels, classes, clubs or organizations.
- Empower teachers, coaches or other activity leaders to reach out to their own sub-groups quickly and easily.

Familiar, Easy-to-Use Interface

Because Mass Notification uses the same Edline interface users already recognize, it requires no training and is simple for anyone to use.

Multiple Language and Delivery Options

- › Provide alerts in English or Spanish.
- › Send broadcast messages dependably and efficiently with your choice of voice messaging, SMS (text alerts), e-mail or any combination of these communication channels.
- › Voice messages can be text-to-speech or recorded by the user.

Manage Contact Information Easily

Enhanced user-contact information page:

- › Supports multiple phone or SMS (text alert) numbers and e-mail addresses.
- › Allows users to choose preferred methods of contact for school messages and for new private report alert notifications (e-mail only).

Enhanced Logging and Reporting

- › Keep track of system use, information flow and message recipients.
- › Provide automated attendance alerts for students marked absent.

Use Your Existing Infrastructure and Data

- › Requires no additional hardware or phone lines for the school.
- › Links to existing contact data that is pre-populated in Edline (for students, parents, classes, groups, functional roles, and others) so there's no additional data maintenance required.
